

# NEW TREATMENT OFFERED

Only available at Riverina Urology within the Riverina and surrounding areas

## Innovative Treatment for Over-Active Bladder Patients Now Available

### URGENT PC NEUROMODULATION SYSTEM

Since 2003, Urgent PC has set the standard for Percutaneous Tibial Nerve Stimulation (PTNS) performance, both in clinical studies and in clinical practice.

#### PROVEN OPTION: FOR MOST PATIENTS WITH ASSOCIATED SYMPTOMS OF OVERACTIVE BLADDER (OAB)

Urgent PC is low-risk with few contraindications and no severe adverse events. Urgent PC is a good option for most patients suffering from urinary urgency, urinary frequency, and urge incontinence.

- Outpatient neuromodulation
- Effective in both men and women, regardless of age<sup>1</sup>
- Low-risk with few contraindications and no severe adverse events
- May be combined with behavioural and drug therapies

#### URGENT PC CANDIDATES INCLUDE THOSE:

- Too old and/or frail for other therapies
- Suffering intolerable side-effects from other therapies
- Experiencing insufficient response to drugs
- Already receiving BOTOX® injections
- Unwilling to perform self-catheterization
- Needing future MRIs
- Who want a non-drug, non-surgical option

The tibial nerve is easily accessed in the lower leg. Stimulation travels from the point of entry near the ankle, up the tibial nerve and to the sacral plexus.

**PREFERRED PATIENT:** Refractory treatment for associated symptoms of OAB.
